

RECOVERIES *Better Than Expected!*

Second Injury Recovery

The Worker's Compensation Industry has realized that traditional recovery methods don't capture the same savings as more aggressively focused efforts.

Several Companies market this more aggressive service to TPA's and insurance companies and typically charge a percentage – as high as 50%, some of which is returned to the TPA or insurance carrier.

EM Risk Management has reviewed both the philosophy and outcome of this approach and agree this process can recapture 35% or more, than traditional methods. *However, The Program exceeded our expectations and increased Second Injury Fund reimbursements 46% since the implementation of this program!*

EM has added more resources and created a **SPECIAL UNIT** to incorporate into our claims handling procedure, for both internal and external clients, and allocate a percentage back to expenses. Our Recovery Resource Unit includes supervision, experienced adjusters and support staff.

To be sure you are getting the most of your Second Injury Fund recoveries, talk to your EM Representative about participating in this successful program can yield a *4:1 Return on Investment*.
